DETAILED ACTION

Remarks

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/22/05 has been entered.

Claims 1-13 & 15-28 are pending in the application and claims 1, 5-13 & 15-27 are withdrawn from consideration for being drawn to a non-elected invention.

Claims 2-4 & 28 are pending examination. ***Claim Objections***

Claims 2 & 28 are objected to because of the following informalities: the statement "...so as to effect dry mixture" is grammatically awkward and should be rephrased. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 2 & 28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear what dry mixture is described as effected.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 2-4 & 28 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6,517,974 (Kobayashi).

Kobayashi teaches a method of making a battery active material by adding an active material together with a conductive material (10:35-60). The mixture is placed in a planetary ball mill, which inherently exhibits rotational and revolving motions (Fig. 5; 15:1-12). The mixture consists of 90 wt.% of active material and 5 wt.% of conductive material, where the respective sizes are 12 microns and 2 microns (25:33-50).

Response to Arguments

Applicant's arguments with respect to claims 2-4 & 28 have been considered but are moot in view of the new ground(s) of rejection.

Applicant argues the planetary ball mill taught by Kobayashi uses stainless steel balls to grind the material. While the planetary ball mill does include stainless steel balls in the grinding method, the container does have both a rotational and revolving motion and therefore anticipates the claim.
